### **DETAILED ACTION**

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

#### **Response to Restriction Requirement**

The election of species requirement set forth in the restriction/election mailed on 3/26/2003 is withdrawn in view of applicant's amendment to the claims limiting the charged material to xanthine.

#### **Specification**

An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification of in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)) with the current status of the priority application indicated.

#### **Claim Rejections - 35 USC § 102**

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

Art Unit: 1623

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-18 are rejected under 35 U.S.C. § 102(b) as being anticipated by Padhye et al., U.S. Patent No. 5,808,041.

Claims 1-5, are drawn to a material consisting essentially of silica and nucleic acids covalently bonded to the silica.

Claims 9 and 18 are drawn to the silica being pure silicon dioxide (silica).

Claims 10-14 are drawn to DNA as the nucleic acid and forms of the material, particularly a bead, array of fibers or a flat surface.

Claims 6-8 and 15-17 are drawn to the material with varying percentages of silicon dioxide, particularly 80%, 90% or 95%.

Padhye anticipates the claims as it teaches a material for purifying nucleic acids (DNA or RNA) which consists of silica (crystalline powder) wherein the silica may be in the form of a bead (see column 4, lines 22-35) or microfibers (col. 5, lines 35-39) or a membrane, which constitutes a flat surface (col.7, lines 9-15). Padhye also teaches that the composition ratio of silica to glass may vary from 1:1 to 100:1, which encompasses the claimed composition ratios of 80%, 90% or 95% as well as pure silicon dioxide.

#### Allowable Subject Matter

The use of the xanthine compound in the bonding material for the nucleic acids appears to be an unobvious improvement over the closest prior art of record, U.S. 5,808,041.
